Summary

Full-Stack Software Engineer with 4+ years building and shipping production web and mobile applications at [Kcube.ai](#). Delivered 7 products across enterprise portals, an AI-powered SaaS, and cross-platform mobile apps serving thousands of users. Strong in TypeScript across the stack React, Angular, and Next.js on the frontend; NestJS and FastAPI on the backend with a focus on REST/real-time APIs, secure authentication, and scalable, API-driven architecture.

Education

University Of Azad Jammu & Kashmir MZD

Bachelor of Science in Software Engineering (BSSE)

Experience

Kcube.ai

Lahore, Punjab, PAK

Software Engineer

2022 – Present (4+ years)

- Built and shipped 7 production web and mobile applications ALA Web Portal, ALA Mobile App, CoreMemories AI, A System, Hailo Platform, Heides Patient Portal, and Image Upscaler using React, Angular, Next.js, and React Native
- Developed backend services with NestJS and FastAPI on PostgreSQL, exposing REST and real-time WebSocket API with role-based access control, JWT/OAuth 2.0, and 2FA.
- Cut initial load time by ~50% through code splitting, lazy loading, and bundle optimization; improved data efficiency with TanStack Query and RxJS caching.
- Integrated third-party services including Stripe, DocuSign, Azure (B2C, Blob Storage), AWS (S3, SES), and QuickBooks across multiple client products.
- Collaborated with cross-functional teams and clients on requirements, architecture, code reviews, and agile sprint delivery.

Projects

[Agrilabour Australia Portal](#)

Angular | TypeScript | RxJS | Azure B2C | RestAPI | React Native

- Enterprise workforce management portal for agricultural workers and employers in Australia, integrating payroll data, compliance documents, and job management through third-party APIs and cloud storage.
- Integrated Azure Blob Storage and DocuSign API for structured document data management including employment contracts, certifications, and compliance records
- Built data-driven Angular modules for candidate profiles, payroll tracking, and job management — consuming and displaying structured data from REST APIs
- Implemented Azure B2C authentication with role-based access control managing data access across candidate, employer, and admin user types

[Hailo — Event Management & Operations Platform](#)

React | NestJS | TypeScript | PostgreSQL | TypeORM | Socket.IO

Enterprise SaaS for managing projects, teams, finance, procurement, HR/leave, and payroll across multi-country event operations.

- Built the NestJS + TypeORM + PostgreSQL backend with granular role-based access control (RBAC), JWT/Passport auth, and two-factor authentication
- Implemented real-time notifications and presence via [Socket.IO](#) + Redis, and background jobs (email, digests, exports) with BullMQ
-

Developed finance & payroll modules with PDF payslip generation (Puppeteer), Excel import/export, and QuickBooks OAuth integration

APR System

React | TypeScript | FastAPI | PostgreSQL | Stripe

- Full-stack AI-powered legal case management SaaS built with a Python FastAPI backend, PostgreSQL database, a React frontend handling structured data across cases, documents, subscriptions, and user accounts.
- Built Python FastAPI backend with SQLAlchemy ORM and Alembic migrations, managing relational data across cases, users, documents, and billing records in PostgreSQL
- Developed Stripe subscription data pipeline including webhook handling, plan-based feature access, and payment lifecycle tracking synced to the database in real time
- Integrated multiple third-party API libraries including Google OAuth, DocuSign for PDF generation, and Calendly wiring external data into the core application workflow

ALA Mobile App

React Native | Expo | TypeScript | Azure B2C | TanStack Query

- A cross-platform mobile app for agricultural workers to access their payroll, jobs, and compliance data via REST API published on the App Store and Google Play.
- Built the data layer with TanStack Query for fast API calls, caching, and real-time sync of payroll, job, and compliance data.
- Integrated DocuSign e-signatures with Azure Blob Storage for secure document handling, and Azure B2C login with role-based access for candidates and employers.

CoreMemories AI

React Native | React | Expo | TypeScript | TanStack Query

- Connected the app to REST APIs to save, fetch, and manage users' memory data across mobile and web.
- Added Facebook and Apple sign-in for secure login, plus PostHog analytics to track how users engage and stay.

Skills

🔗 Frontend

Angular, React.js, Next.js, React Native, Redux, RxJS, TanStack Query, Tailwind CSS, Material UI, SCSS

🔗 Backend

Node.js, NestJS, Express.js, FastAPI, WebSockets (Socket.IO)

🔗 Mobile App

React Native, Expo, EAS Build, native module integration, push notifications, App Store & Google Play deployment

🔗 Databases

PostgreSQL, MongoDB, SQL Server, MySQL, TypeORM, SQLAlchemy

🔗 Cloud & DevOps

Azure (B2C, Blob, Storage AD), AWS (S3, SES, Lambda), Docker, CI/CD, Git/GitHub, Redis, BullMQ

🔗 Auth & Payments

JWT, OAuth 2.0, Azure MSAL, PKCE, 2FA, Stripe

🔗 Integrations

DocuSign, QuickBooks, SendGrid, Calendly, PostHog, Sentry

Awards

Employee of the Quarter (2x) — Kcube AI

Recognized twice for delivering high-impact projects and technical leadership across cross-functional teams
